

# HyFlex<sup>®</sup> Lite

Maximal dexterity and sensitivity  
for the most delicate handling

Intermediate Design

General purpose knitted and dipped gloves

Ansell's HyFlex Lite 11-600 and 11-605 industrial gloves are designed for light and delicate applications in dry environments that require maximal levels of dexterity. Like a second skin, they offer comfortable, exact handling of small objects. They also ensure product protection from fingerprints, glove-generated debris, and cross-product contamination. When your operators need precision and/or clean handling, HyFlex Lite 11-600 and 11-605 gloves are the answer.

### Recommended Usage

In all categories of industries, the assembly of small pieces such as:

- small bearings
- joints and small springs

Product protection in handling:

- cosmetics packaging
- photo prints
- optical goods
- micro-electronic and micro-mechanic components

### Maximal comfort

The stretch knitted nylon liner, together with the specific formulation of the polyurethane coating, offers flexibility and elasticity.

### Optimal tactility and dexterity

Like a second skin, the gloves help the user feel and handle the work with precision. These gloves are designed to combine ultra-thinness with superior tear resistance for safety. The polyurethane coating gives a good grip in dry conditions.

### Helps prevent product contamination

The gloves' white colour alerts the user of dirt, thus helping to avoid potential product contamination when carrying out delicate operations. Taint and lint-free, HyFlex Lite 11-600 and 605 gloves help protect products in demanding work environments. The gloves can be decontaminated for usage in clean rooms.

### How to choose between HyFlex Lite 11-600 and 11-605 gloves for your application

The specification table below illustrates the differences between the 11-600 and 11-605 gloves. The HyFlex Lite 11-600 glove is palm coated, combining a secure grip with abrasion resistance on a wide hand surface. The HyFlex Lite 11-605 glove is only fingertip coated for applications that require a localised grip, thus allowing maximum ventilation for the rest of the hand.

### Packaging

12 pairs per polybag, 12 polybags per carton
